

TRANSPONDER INSTALLATION

To ensure your laptimes are correctly recorded, it is imperative that the transponder is positioned correctly.

The transponder must be installed a maximum of 120cm from the ground, without obstruction between the transponder and the asphalt. The diagram below indicates the best options.

Transponder placement options

NOTE: As each race track is different and the quality of the timekeeping loop varies, it is important that you verify your Lapttime is being correctly recorded after your first group session. Please consult the timekeeper if you have any questions

TIMEKEEPING AND POINTS

It is imperative that the Rider:

- They check their position on the starting grid against the starting grid listing
- The Start Number and Transponder number that they have been registered.
